

Mannitol DC

Mannitol Directly Compressible (DC) is specifically designed to assist in making high quality chewable mints, gums, and sublingual tablets. Due to its low sweetness profile and great binding and flowing properties, it is also often used as a filler in regular dietary supplements and pharmaceutical tablets.

This product was specifically designed to help our customers that are looking to create confectionery products similar to SweeTARTS, breath mints, PEZ, or Tic Tacs. While the sweetness profile is very short and low, Mannitol DC has a cooling effect that our current customers use to enhance the taste of mints in particular. Mannitol DC also has a low glycemic index of 2, making it good for diabetic diets and products that are sold to health-conscious markets.

Simply add flavoring, active ingredient, and coloring, and the Mannitol DC will act as the binder and flowing agent. Depending on the active ingredient, an anti-caking agent might need to be added to the mix. If you have formulation questions, please do reach out to our team.

Main Benefits of Mannitol DC Powder

- **Perfect for Confectionery Products** - Mannitol DC is perfect for making chewable tablets, mints, and gum.
- **Versatile** - This excipient functions as both a binder and flowing agent.
- **Ideal for Diabetic and Health-Conscious Markets** - Mannitol DC has the least amount of calories and the lowest glycemic index in LFA's range of directly compressible sweeteners.
- **Dissolves Smoothly and Consistently** - Mannitol DC dissolves in the mouth in a smooth and consistent manner, resulting in a creamy feel to chewable and sublingual tablets.

Specifications
